Last term test N1

Text :

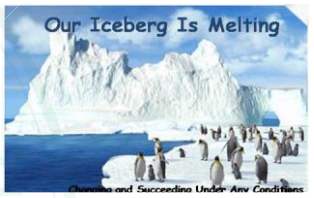

Scientists are saying that the earth is getting warmer, the earth's temperature has been rising and the problem is getting worse.This is known as Global Warming.
When the sunlight reaches the earth, the atmosphere stops some of the heat from going back out into space.This is called the Green House effect.It is important for maintaining life on earth.

What are the green house gases ?

Greenhouse gases are the gases in the atmosphere that actually trap the heat we get from sunlight.Carbon dioxide(CO_2) is one of the most important Greenhouse gases.
Human activity is making the level of Greenhouse gases in the atmosphere rise.Burning fossil fuels like coal and oil and cutting down trees are examples of this.It is making the earth warmer than it should be.

In the next hundred years,the earth could become a lot warmer.The ice at the poles,or the most northern and southern points of the earth could melt ,this will make the sea level rise and many cities could be flooded ;many animal and plant species could become extinct.
