Third Term Second Test

Text:

The environment has been polluted in many different ways which has left many bad effects on plants, animals, sea creatures and human's health. The three major ways are: Water, land and air pollution.

Water pollution is the contamination of rivers lakes and seas caused by human activities. It occurs when wastes are discharged from wastewater treatment plants, other cause is factory which can cause cholera and fever.

Land pollution is the destruction of the earth's land surfaces. It's often caused by man activities such as careless disposal of wastes and wrong use of land planting. They will lead to all kinds of diseases like breathing problems.

Air pollution is also a result of human activity where chemicals and other dangerous materials are released into the air by vehicles and factories. It can cause serious breathing problems, lung cancer and heart diseases.

I think it's not only the role of the government which let our environment clean, it's also ours and it starts from our homes, schools and communities. Children should be aware about how to protect their environment and their health.
