The Second Term Exam of English

Part One: Reading (15 pts)

Smartphones are the friendly gadgets **which** have made everything reachable through a touch. They have occupied a huge place in our daily lives. A smartphone is the first thing **we** look at in the morning and the last thing we see before going to bed. As any electronic gadget, smartphones have advantages and disadvantages.

Smartphones keep your loved ones in touch, either through calls, texts or images, which express the feeling in a sweet and amusing way. You may know where you are and find easy ways and routes to go anywhere, especially in an unknown place. You can spend your time wisely reading the news or doing some official work. You can entertain yourself with games, music or movies. Food and groceries can be ordered online. Email and Banking become easy. Endless applications are available to make your dreams come true.

The electromagnetic radiation will be high because of the heavy internet usage and might lead to health problems such as a brain tumor and Skin Cancer. The HEV light emitted from the screen of a smartphone leads to severe eye-strain during long-time use and would slowly damage the retina. Even many psychological issues such as loneliness, being suspicious all the time, feeling self-centered etc. are caused by using a smartphone and being online, for most of the time. Spending too much time on your phone creates neck problems and sleep deprivation. With every emerging new model, there come new features which are really tempting to use and you may get into the crazy whirlpool of going for new models always.

Smartphones are a two edged sword. Wiseness lies where you take the positive and helpful aspects of anything and leave the negative and unnecessary attachment to that. So, being aware of the pros and cons and having self-control could save you from many disasters, which is really necessary.
