Text:

Algerian Biodiversity

Algerian biodiversity is very rich, with approximately 16,000 known species. Known marine biodiversity is around 3,183 species.Mountain biodiversity is also very rich. Further, Algeria's Sahara hosts a large diversity of ecosystems.A big number of **them** are still unknown.
However,Algerian biodiversity is endangered. The flora and fauna in the country consist of 121 species **which** are endangered. They include 23 fish species, 14 mammals and 11 bird species. The threatened plant species are the Tassili cypress in the Tassili Biosphere Reserve, the black pine and thuriferous juniper. Among the threatened animal species are the wild gazelles, antelopes, barbary sheep, barbary deer, cheetah, monk seal and the barbary macaque.
The main threats to biodiversity are the destruction of biological resources, extension of cultivated areas,urbanization and infrastructure development, pollution, tourism and hunting.
To preserve biodiversity in this country,many National Parks are created and programmes are elaborated for certain species, such as the Mediterranean monk seal and the red coral.
